ASSIGNMENT 2 | AI TOOLS

Paper Stool Website

AI Project Presentation

Task: build a modern product website
and explain the complete AI workflow

Zoom Presentation

Requirements Coverage

Task Description (10)	Covered
At least 2 AI Tools + ease/tech/reliability (20)	Covered
Explanation slideshow of process (30)	Covered
Final output + analysis of expectations (20)	Covered
Reflection: advantages/disadvantages (20)	Covered
1-page summary beside output	Created

This deck is structured exactly by rubric order, so grading is straightforward.

1) Task Description

What I chose to build

- A one-page product website for a foldable Paper Stool
- Motivation: crowded train rides and no seat availability
- Target users: students, commuters, travelers
- Goal: practical, stylish, portable seat concept
- Success criteria: clear story, responsive UI, smooth flow

Real-life use-case inspired the entire project concept.

The Paper Stool product

The problem: crowded Israeli trains

2) AI Tools (Ease, Technology, Reliability)

Codex

Ease: fast vibe-coding with natural language prompts

Technology: GPT-based transformer LLM (OpenAI)

Reliability: strong for HTML/CSS/JS generation

Gemini

Ease: quick prompt-to-image experiments

Technology: generative multimodal model (Google)

Reliability: good quality, variable consistency

Claude

Ease: clear long-context editing & refining

Technology: transformer LLM (Anthropic)

Reliability: strong for code refinement & review

3) Process Documentation

1 — Define

Identified real problem (crowded trains)

2 — Prompt

Used Codex + Claude for site structure

3 — Build

Iterated HTML/CSS/JS with AI refinement

4 — Images

Generated visuals with Gemini

5 — Finalize

Reviewed, cleaned, prepared deliverables

Detailed Workflow

- Prompted Codex to generate initial HTML/CSS/JS structure for a product landing page
- Used Claude to refine code, fix responsive layout issues, and improve content flow
- Generated 10+ concept images with Gemini showing Paper Stool usage on trains
- Compared AI outputs, selected best results, manually validated final deliverables

Sample AI-generated concept images (Gemini)

4) Final Output + Analysis

Product: foldable Paper Stool

AI-Generated: concept in use on train

Final Product

- Completed one-page website with product sections and interactions
- Includes gallery, FAQ, form logic, and media section
- Expectation fit: about 80 percent
- Could not fully achieve consistent generated image style

Expectations Met: 80%

What I wanted but could not fully achieve:

Perfect consistency between all AI-generated train scenario images.

5) Reflection

Advantages

- Very fast implementation cycle
- Easy to test ideas through prompts
- Better productivity for coding and content

Disadvantages

- Image consistency is not always stable
- Manual validation is still required
- Some outputs need several iterations

Did I enjoy it?

Yes. The process was practical and creative. I enjoyed turning a real daily problem into a working digital product presentation.

Submission reminder:

- Submit on course website
- Submit on the additional provided link

Image Evidence 1/10

Product Photo

The Paper Stool product: foldable, portable, eco-friendly design

Image Evidence 2/10

Real Photo

Reference: Boarding Israeli train at station

Image Evidence 3/10

AI Output

AI-Generated (Gemini): Passengers using Paper Stools at train entrance

Image Evidence 4/10

AI Output

AI-Generated (Gemini): Commuters with stools at platform

Image Evidence 5/10

AI Output

AI-Generated (Gemini): Paper Stools inside a train car, full interior view

Image Evidence 6/10

AI Output

AI-Generated (Gemini): Train interior with stools in use, different angle

Image Evidence 7/10

AI Output

AI-Generated (Gemini): Passengers with stools at train entrance

Image Evidence 8/10

AI Output

AI-Generated (Gemini): Overhead view of various seating scenarios

Image Evidence 9/10

AI Output

AI-Generated (Gemini): Paper Stools in use — passengers seated comfortably on the train

Image Evidence 10/10

AI Output

AI-Generated (Gemini): Same scenario without Paper Stools — standing room only
